Avoidance Area – Granting rights-of-way (surface, subsurface and aerial) within the area should be avoided, but may be granted if there is minimal conflict with identified resource values and impacts can be mitigated.

Closed – closed to fluid mineral leasing, mineral material disposal, livestock grazing, or off-highway motorized vehicle travel.

Exclusion area – Rights-of-ways (surface, subsurface and aerial) will not be granted within the area.

Limited to Designated Routes – Off-highway motorized vehicle use within the area is limited to designated routes.

Limited to Existing Routes – Off-highway motorized vehicle use within the area is limited to existing routes.

Not addressed – This type of management was not addressed separately from the surrounding area in the original designation.

NSO - No Surface Occupancy – Open to Fluid Mineral Leasing subject to no surface occupancy stipulations on an area of 40 acres or more or an area more than ¼ mile wide.

Open – The activity is allowed in the area. NEPA compliance including cultural, plant and animal clearances would be required for most activities.

Prohibited - The specific water development, livestock management, fencing, and fire management actions are not allowed.

Prohibited* - New Special recreation permits are prohibited; existing permits would remain.

Restricted (a) – See Fire Management – Suppression and Rehabilitation (below)

Restricted (b) – See Fire Management – Suppression and Rehabilitation (below)

Restricted - Limitations applicable to water developments, livestock management, fencing, juniper removal, fire management, and recreation use levels as described below.

- **Water Developments** – allowed only where identified resource values (botanical, wildlife, scenic, cultural, watershed) will be enhanced or maintained and impacts can be mitigated.
- **Livestock Management** – Salt placement within and adjacent to the area will be considered on a site specific basis for maximum protection of identified resource values. Domestic livestock grazing use will not be increased within the area boundaries.
- **Fencing** – allowed only where identified resource values (botanical, wildlife, scenic, cultural, watershed) will be enhanced, maintained, or protected from degradation and impacts can be mitigated.
- **Fire Management** – Suppression. (a) allow emergency fire vehicles that disturb the soil (such as bulldozers and graders) to enter the area only to protect life or property and limit heavy engine use to existing roads or trails. (b) suppression may proceed with protection of the identified resource values given priority.
- **Fire Management** – Vehicle Use. Vehicle use should comply with the OHV designations in a given area (Limited, Closed, Open).
- **Fire Management** – Rehabilitation. (a) mechanized, surface-disturbing equipment are excluded from use, and only species native to the area may be used. (b) mechanized, surface disturbing equipment and non-native plant materials may be used, with protection and maintenance of the identified resource values given priority.
- **Recreation Use Levels** – Party size limits, river use days and campsite restrictions would be specified to maintain wild and scenic river qualities and protect wildlife and plant communities.

Withdrawal - Areas to be recommended (to the Secretary of Interior) for withdrawal from operation of the mining laws (locatable mineral entry). In areas open to mineral entry an approved plan of operation is required prior to commencing any operation regardless of size, except casual use, within designated ACECs.
